

Personalized healthcare designed just for you

Your health needs are as unique as you are. Your dedicated Carelon Health care team of doctors, nurses, and other care providers takes the time during your care appointments to get to know you and your health. We support your personal needs and concerns, and together with your primary care doctor or nurse, we ensure you get the right care, at the right time and place. We create exceptional care experiences that help you navigate your health and improve your quality of life.

Care that supports your health journey

We are the leaders of a comprehensive, innovative approach to healthcare — one that builds a supportive care team around each patient, in their most comfortable setting:

Healthy Start™ is your first step to better health. This complete head-to-toe checkup for new patients includes preventive screenings; on-site lab testing; a medicine review; a closer look at your behavioral health, movement, and balance; and referrals to specialty care, if needed.

Primary care doctors and nurses who will give you the time and attentive care you deserve.

Nationally recognized prevention and disease management programs can keep you healthy and help you manage health conditions.

Healthy Journey is a complete checkup Carelon Health patients receive every year that includes a medical evaluation, physical exam, and more. Your personalized care plans are also updated as needed.

Care where and when you need it — in our care centers, at home, or virtually.

Behavioral health support to help you manage and navigate the emotional side of health.
